

ARCHITECTURE **PORTFOLIO**

HAVILA ROSE

2020 - 2026 SELECTED WORKS:
PROFESSIONAL & ACADEMIC

RESUME

HAVILA ROSE K

ARCHITECT | BIM MODELER | URBAN PLANNER

I am an architectural designer with over 2 years of experience in design and development. I have successfully contributed to various projects, demonstrating proficiency in designing. My commitment to design, collaborative approach and adaptability make me a valuable asset to any architectural team. With a professional certification in BIM , now my goal is to expand my skills and knowledge in architecture and BIM industry at a professional level.

EDUCATION

-  2025 June - 2025 August
BIM Professional Training
BIMEX Engineers
(Autodesk Certified)
-  2021 September- 2023 April
Master of Planning (M.Plan)
National Institute of Technology
(NIT- Bhopal)
-  2015 July - 202 Oct
Bachelor of Architecture(B.Arch) (5 year)
Holy Crescent College of Architecture
(Mahatma Gandhi University, Kottayam)

WORK EXPERIENCE

-  2023 July - 2025 July (2 years)
Job Title: Architectural Designer (Remote)
Company : JicJak Architects
Location: Kerala, India
-  2023 May - 2024 May (1 year)
Job Title: Architecture Tutor
Institute : Mangalam School of Architecture and Planning (MASAP)
Location: Kottayam, Kerala, India
-  2021 April - 2021 September (5 months)
Job Title: Junior Architect
Institute : Girafe Architecture
Location: Ernakulam, Kerala, India

INTERNSHIPS

-  2025 Sep - 2025 Oct
Job Title: Intern BIM Modeler
Institute : BIMEX Engineers
Location: (Remote)
-  2018 Dec - 2019 April
Job Title: Intern Architect
Institute : JAID Architects
Location: Thrissur, Kerala, India
-  2018 June - 2018 Oct
Job Title: Intern Architect
Institute : Sanskriti Architects
Location: Ernakulam, Kerala, India

REGISTRATION & CERTIFICATION

Registered Architect - Council of Architecture - COA India

Professional BIM Training- Architecture / Structure

GATE 2023 Qualified (Score:526)

LANGUAGES

English - Professional Working Proficiency

Malayalam - Native

Hindi - Limited Working Proficiency

Spanish -Basic / Elementary Proficiency

"These selected works from my professional and academic journey offer only a glimpse into the larger project. However, I hope this portfolio provides enough for an initial understanding."

01

AFFORDABLE MULTI FAMILY HOUSING

Residential Project | Kerala, India | Site Area : 362.27 Sq.M | Jicjak Architects

Roles : Design Development, Construction Drawings, Visualization, BIM/Revit and Renderings

Project Description

The apartment was designed for 8 rental housing units arranged across 3 floors in a plot of area 0.089 Acre / 362.269 Sq M. All the 8 units are 2BHK units but of 3 different typology.

The ground floor consists of two housing units and car parking for three four-wheelers. The first and second floor consists of 3 housing units. This is a residential apartment on a small plot designed as affordable housing.

Concept

The building is conceived as a compact mass organized around shared circulation spaces, optimizing land use while maintaining ventilation and social interaction

Form Development and Structural Evolution

Project designed as a compact residential block organized around a shared social+ circulation space for residents. L-Shape maximizes site area utilization and natural cross ventilation .

02

MODERN TROPICAL RESIDENCE

Residential Project | Kerala, India | Site Area : 204.19 Sq.M | Jicjak Architects

Roles : Schematic design, Design Development, Construction Drawings, BIM/Revit and AI Assisted Renderings

Project Description

Kerala has a warm humid climate with an average 6 month long monsoon. This home design is combined with aesthetics of modern design and traditional kerala architecture elements. The house with a built up area of 1770.97 Sq Ft, cater to modern living without compromising culture and climate responsiveness.

Climate & Cultural Response

Sloped roof is ideal for the long monsoons and hot summer. The clay tiles used in the roof helps in reducing the heat gain.

The inner courtyard resembling the 'nadumuttam' (central courtyard in traditional kerala homes) forms the point of interaction.

Concept

The design centers around a double-height courtyard that visually connects both floors, enhancing interaction and openness within the house. The staircase acts as a spatial spine that brings physical connection.

Modern Tropical Residence- Kerala

Floor Plans and Elevations

Floor Plan

Floor Plan is a centralized plan with an inner courtyard that is similar to the nadumuttam/ central courtyard of the traditional Kerala Homes, is placed at the center

Desert Grey 60 cm x 30 cm (Kajaria)

Desert Verde 60 cm x 30 cm (Kajaria)

Lunetta Dark 40 cm x 34 cm (Kajaria)

Bathroom Finishes

To create a calm space, a combination of neutral toned ceramic tiles - Desert Grey 60 cm x 30 cm, Desert Verde 60 cm x 30 cm and Lunetta Dark 40 cm x 40 cm (Kajaria) is used. False wall behind water closet is used to conceal the flush tank. Desert Grey tile is used here to highlight the wall in the mid of other Desert Verde tiles.

03

URBAN RETAIL COMPLEX

Commercial Project | Kerala, India | Site Area : 762.92 Sq.M | Girafe Architects

Roles : Construction Drawings, Facade Design and 3D

Project Description

Commercial space for shopping that is spread in three floors along with a basement floor for parking. The elevation was made using ACP panels.

04

ADAPTIVE REUSE: HEAL DENTAL CLINIC

Commercial Healthcare Project- Interior | Kerala, India | Freelance Project

Roles : Spatial Planning, Interior Design, Material Selection

Project Description

The building was constructed as a residence with 3 bedrooms, living room, dining room, kitchen and a sitout in 1970s. It was not been used for many years. A modern dental clinic in this building was designed by utilizing 3 major areas of the building while keeping the other areas of the building for its residential usage itself.

Spatial Planning

The sitout, living room and a bedroom of the old building was converted into the modern dental clinic. The sitout is used for the patient waiting area, living room and bedroom used as dental clinic treatment rooms.

Thesis - Bachelor of Architecture (B.Arch) Center for Theology

A curated summary of the thesis project is included; the complete research, analysis, and design development are available in the full thesis document

07

Center for Theology

Institutional Project | Kerala, India | Academic Project

Project Aim

To design a space for a christian theology to support the future of syro malabar church in kerala by incorporating theology center, major seminary and a museum.

Syro Malabar Church population distribution

Arrival of st Thomas in kerala led to a new community of christians in kerala known as the malankara mar thoma christians which is the first christian community in kerala. Today,the Syro-Malabar Church is the largest of the St. Thomas Christians ("Nasrani") denominations with over 4 million believers.

Project Feasibility and Site

Major retreat centers of Syro Malabar Church is situated in the Kochi Salem Highway. Due to this reason, the site is the best location for museum as there will be more christian population travelling through this route.

Location of Major Diocese, Seminaries and Museums

Concept

The activities happening inside a seminary can be broadly divided into three parts which are LIVE, LEARN and WORSHIP. Live happens in room and refectory, learn happens in class and library and worship happens in chapel. In addition to the main chapels, each classroom will have its own prayer space.

Zoning and Master Plan

Zoning

The site is divided to 3 major spaces as internal world which is the seminary, external world which is museum and the common world which becomes an overlapping of both these worlds. The spaces are placed in such a manner that seminary gets the maximum privacy.

Master Plan

Sports Area

Sports grounds are made next to the road which connects two major residential areas for the young people to use the ground along with seminarians and thereby create a zone of interaction.

Mount of Cross

This is the most elevated level in the site which is to convert to a mount of cross. This will act as an open altar during special functions in the seminary.

Theology Block

Theology block is placed not so far from road as they are students are day scholars and as they need easy access. It is located in the buffered space of the site.

Admin Block

Admin block is placed near to road as the first building of Seminary.

Museum

Museum is placed near to the highway for the easy accessibility of visitors. Therby leaving the noise buffered zone for Seminary.

Chapel

Position of church is adjunct to road for people to easily access. Church becomes the facade of the seminary also as an interactive space.

Plaza

Plaza is made road facing by using the adjacent spaces in road. This helps in the easy accessibility for people. Proximity to Church brings more activities here.

Buildings and Details

Theology School Block

The block is for students of course of theology (not seminarians) as distance education.

The building basically consists of:

- Degree class (2 nos),
- Diploma class (2 nos),
- Wash / Toilet spaces,
- Interaction + prayer area

Scale: 1:300

The core idea was to provide a space for interaction which could be also used as a prayer area. For making this space equally accessible for all, the center passage is made for circulation and interaction.

Academic Block

Academic block is the main core learning space of the seminary. In order to provide a calm atmosphere for chapel, it was better to zone it in the top floor, having classrooms in the ground floor.

A passage is made around each classroom through which the person enters to the chapel. This space will act as the buffer for the noisy and calm areas.

Scale: 1:500

The triangular in between space of classrooms are made as noise barrier and an interactive space. The distance and the plants in between acts as noise barrier.

Accommodation Block

Accommodation block is made as separate blocks for each batch. The building basically consists of:

- Seminarian rooms
- Common space
- Wash / Toilet spaces
- Interaction + central courtyard

Scale: 1:300

The concept was to bring interaction among seminarians through central courtyard space. It is also treated as a green space with a tree in the middle.

Usually, the rooms of seminarians have very small areas. To solve this problem, a common space is provided for each two rooms.
